INFRASTRUCTURE DATA & AI NEXT-GEN

Strategic redevelopment of an industrial site
of ±100.000 m²

WALLONIA, BELGIUM
France / Benelux border region

ENERGY POTENTIAL
A platform suited to tomorrow's infrastructure

STRATEGIC INDUSTRIAL REDEVELOPMENT OPPORTUNITY IN A BORDER REGION

DATA & AI INFRASTRUCTURE FOR TOMORROW

A RARE INDUSTRIAL ASSET

Strategic advantages brought together on one site

AN INDUSTRIAL SITE READY FOR USE

- ~100,000 m² of land available and secured
- Infrastructure suited to high-density digital uses
- Rapid deployment and controlled implementation

STRATEGIC LAND

- Immediately available and secured
- A redeveloped site ready to host the project

ENERGY POTENTIAL

- Direct access to electricity networks
- Capacity to integrate renewable energy

WATER RESOURCES

- Natural access to water through the site's configuration
- A sustainable solution for cooling

AN INITIAL 2 MW PHASE

An initial phase designed with the operator, with scope for expansion

2 MW

TOTAL SITE POWER CAPACITY

IT equipment, cooling and ancillary systems

Up to 96%

TARGET LOCAL ENERGY COVERAGE

Coverage and operating assumptions to be refined

POWER SUPPLY

Grid connection, local generation, storage and backup solutions to be defined jointly

ENERGY EFFICIENCY

Closed-loop cooling
Target PUE* < 1.2, subject to technical studies

An initial phase sized with the operator, followed by expansion in line with demand and secured capacity.

* PUE (Power Usage Effectiveness): total data center energy consumption ÷ IT equipment energy consumption.
The closer the ratio is to 1, the greater the efficiency. Its theoretical minimum is 1. Heat recovery is measured separately.

ENERGY SOVEREIGNTY AND RESILIENCE

An initial 2 MW phase: local generation, storage and grid supply subject to validation

ON-SITE SOLAR

Strong solar potential on rooftops and suitable areas across the site.

STORAGE

Battery projects on site and nearby, availability to be confirmed.

HYBRID MICROGRID

Integrated power solution for reliable, flexible, decarbonised supply.

NATIONAL GRID

Existing HV connection nearby, with scope for expansion.

LOCAL WIND

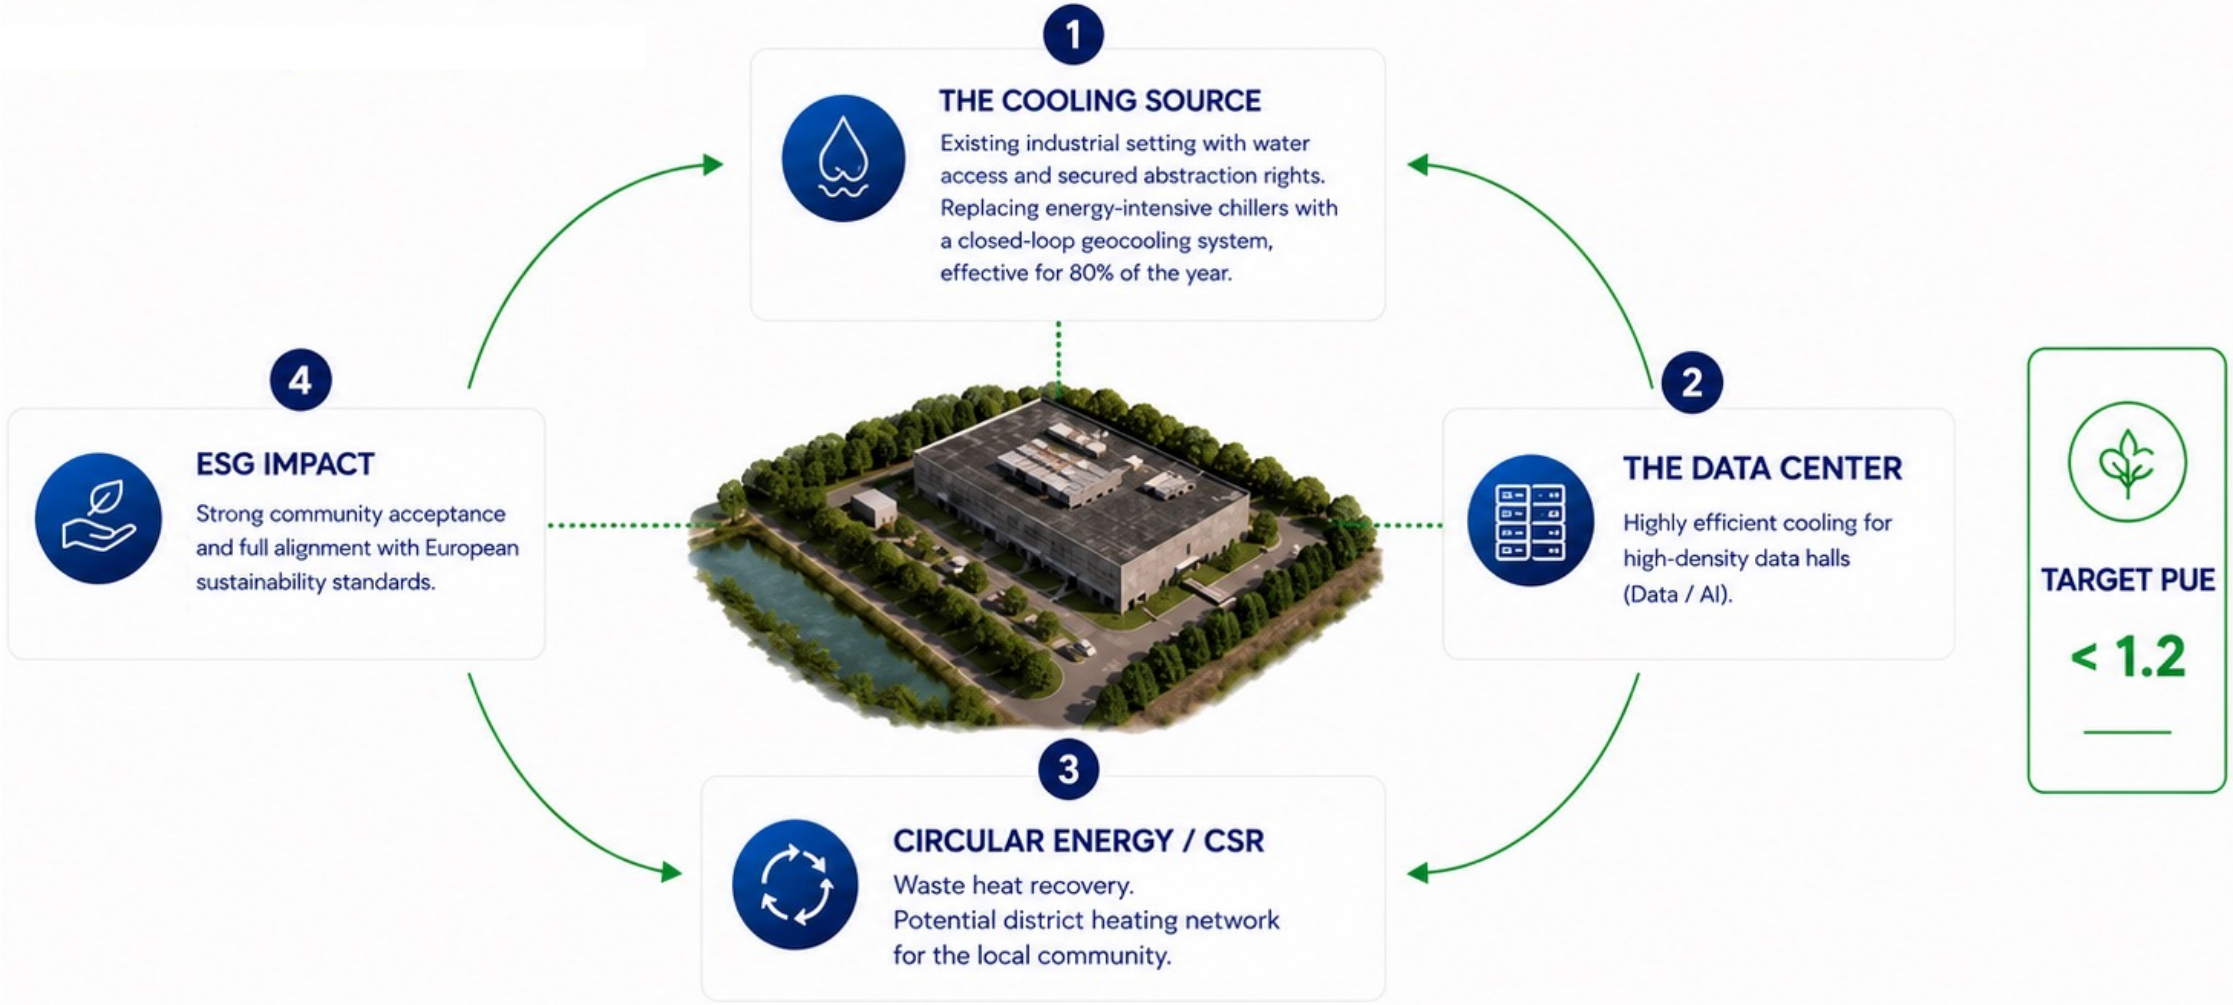

Nearby wind turbines. Potential direct supply under a PPA.

2 MW

Total site power capacity

WATER COOLING AND THERMAL SYMBIOSIS

Waste heat recovery for local uses

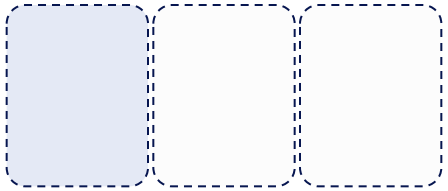

STRATEGIC LAND:
AGILE DEPLOYMENT AND INDUSTRIAL REDEVELOPMENT

1 PILOT PROJECT
IMMEDIATE

- Existing industrial building able to accommodate **an initial phase.**
- For a rapid start **(Tier III or Tier IV** to be defined).

2 RAPID EXPANSION
SHORT TERM

- Land available in phases, with one third ready for immediate development.

3 LARGE SCALE
MEDIUM TERM

- A large industrial site spanning several hectares.
- Evolution towards a Tier III or Tier IV design with spatial redundancy.

ESG IMPACT:

NO NEW LAND TAKE INDUSTRIAL REDEVELOPMENT

Repurposing an existing industrial brownfield site.

NEXT STEPS

A discussion about the project

1

INITIAL CONTACT

AN INITIAL EXPLORATORY DISCUSSION

Assess how the site could meet your capacity needs.

Explore an initial phase tailored to your operating requirements.

2

NON-DISCLOSURE AGREEMENT (NDA)

PROJECT PROTECTION

Sign an agreement to protect site confidentiality and ongoing negotiations.

3

DATA ROOM ACCESS

ACCESS BY INVITATION ONLY

Detailed site information.
Including:

- Topographical surveys
- Grid and fibre capacity
- Technical documentation
- Potential joint venture structures

ACCESS BY INVITATION
